EDUCATION

University of Michigan <i>B.S.E. Computer Science and Engineering Physics</i>	Aug. 2025 – Present 4.0 GPA
University of Michigan <i>High School Dual Enrollment</i>	Aug. 2023 – Dec. 2024 4.0 GPA
Honors & Awards <i>Wharton Investment Competition Semifinalist (1% out of ~5,000)</i>	Jan. 2025
<i>Michigan Ross Business + Tech Case Competition Winner</i>	Dec. 2025
<i>MHacks Winner - Google Gemini Track</i>	Sep. 2025

EXPERIENCE

Student Software Consultant <i>Menlo Innovations</i>	Sep. 2025 - Dec. 2025 Ann Arbor, MI
- Develop internal payroll system in Java to validate employee timesheet submissions and notify missing employees - Interface with SQL databases, JavaMail API, and Java Message Service to implement timesheet process - Associated with the Innovation for Impact student software consulting club at University of Michigan	
Lab Member <i>University of Michigan</i>	May. 2025 - Present Ann Arbor, MI
- Researching Vim-style keybinds and action macros in the Hazel editor to improve developer efficiency - Enhanced Hazel editor usability through developing new features and resolving long-standing bugs - Applied type theory principles to design and implement core functionality for onboarding project	
Engineering Captain <i>Pioneer High School FIRST Robotics Competition Team</i>	Sep. 2021 - May. 2025 Ann Arbor, MI
- Directed a 70-person team to design, build, and program three robots, managing the entire engineering process, coordinating cross-team collaboration, and ensuring timely project completion Transformed software stack by migrating from Python to Java, adopting functional programming practices, and improving odometry precision, computer vision reliability, and motion control accuracy - Advanced team ranking from 40th percentile to 93rd percentile worldwide in three years	

PROJECTS

Microsoft Imagine Cup - GlitterCode	Dec. 2025 - Jan. 2026
- Built AI-assistant block coding platform for students; validated and iterated features with 8 students and 2 teachers; developed pitch deck and recorded pitch and demo to explain product, PMF, and GTM strategy. - Used FastAPI backend with WebSockets to communicate with Next.JS frontend for learning features; integrated Microsoft Foundry and Microsoft AI services to create four specialized LangGraph AI agents. - Deployed Docker Containers for frontend and backend through Microsoft Azure Container Apps service.	
xAI Hackathon – Grok Lens (selected participant)	Dec. 2025
- Built NotebookLM-style AI-research agent using Next.js, React, FastAPI, Grok API, LangChain, and Selenium - Generates podcasts, flashcards, quizzes, and verifiable study guides from any topic; automatically fact-checks claims, draws sources and articles from Grokipedia, and cites references in real time - Designed and implemented full-stack architecture with dedicated FastAPI endpoints calling Grok APIs for each study tool and developed React frontend components for seamless and consistent user experience	
MHacks - clAI (Command Line AI)	Sep. 2025
- Developed using Electron, React, and FastAPI for MHacks 2025, winning Best Use of Google Gemini track - Remote shell application that uses Google Gemini to simplify command line interaction, translating natural language to shell commands with support for extensive UI customizability and multiple shell instances - Implemented WebSocket communication with backend to enable real-time interaction, developed frontend features to improve user's ease of use, evaluated and iteratively tested Gemini API outputs for consistency	
F1 Racing Game	Feb. 2023 - Mar. 2023; Aug. 2025
- Developed a racing game in Unity with C#, featuring computer-controlled opponents and fast-paced gameplay - Utilized Unity's reinforcement learning framework to train AI models to race optimally against other cars
